Education

Ph.D. Student, Electrical Engineering — KAIST

2025 – Present

- Advisor: Prof. Hyun Myung — Urban Robotics Lab

M.S., Electrical Engineering — KAIST

2023 – 2025

- GPA: 3.7/4.3
- Advisor: Prof. Hyun Myung — Urban Robotics Lab
- Thesis: "Uncertainty-aware Multiple LiDAR-Inertial Odometry for Outdoor Mobile Robots"

B.S., Electrical Engineering — INHA UNIVERSITY

2017 – 2023

- GPA: 3.9/4.5
- Thesis: "A Fast Correspondence Matching for Iterative Closest Point Algorithm"

Research Interests

I work on localization for field robots. My focus is LiDAR-inertial odometry that stays accurate under fast motion and vibration, and global localization that bounds drift over large outdoor missions without loop closure or GNSS. I build these methods into complete systems and test them on legged and wheeled robots in challenges and industry projects.

2026

Honors & Awards

- Winner, COMFORT Localization Challenge** LEAD — IROS 2026, PITTSBURGH, USA

- Challenge: Estimate the trajectory of an ANYmal legged robot in six field scenes of the GrandTour dataset.
 - Role: Built the whole system: LiDAR-visual-inertial odometry and online drift correction.

2026
- Winner, Nothing Stands Still Challenge** — CVPR 2026, DENVER, USA

- Challenge: Align scans of a building site taken at different construction stages into one map.
 - Role: Graph optimization that aligns the scans across stages.

2026
- 2nd Place, Quadruped Robot Challenge** — ICRA 2025, ATLANTA, USA

- Challenge: Legged robots cross rough-terrain lanes and complete inspection and manipulation tasks.
 - Role: LiDAR-inertial odometry for onboard navigation.

2025
- 2nd Place, Quadruped Robot Challenge (Autonomous Track)** — ICRA 2024, YOKOHAMA, JAPAN

- Challenge: Legged robots run as many laps of a course as they can in 10 minutes, fully autonomously.
 - Role: Localization in a prebuilt map.

2024
- Winner, HILTI SLAM Challenge (LiDAR Single-Session)** — ICRA 2023, LONDON, UK

- Challenge: Estimate accurate trajectories from data recorded on construction sites, in narrow rooms, and in the dark.
 - Role: LiDAR-inertial odometry and merging of multiple sessions.

2023

Projects

- GNSS-Free Visual-Inertial Navigation for Drones** — HANWHA AEROSPACE

- Role: Fused visual-inertial odometry with satellite-image localization.

2026 – Present
- Online Radar-LiDAR-Camera Calibration for Autonomous Vehicles** LEAD — LG INNOTEK

- Role: Led development of online calibration between radar, LiDAR, and camera without targets.

2025 – Present
- Off-Road Autonomous Driving in Unstructured Terrain** — HANWHA AEROSPACE

- Role: Built LiDAR-inertial odometry (SE(3)-LIO) and fused it with satellite-image localization for driving without GNSS.

2023 – 2026
- Mobility Intelligence Software for Legged Robots** — KEIT

- Role: Set up the multi-LiDAR sensor system and built odometry and localization in prebuilt maps.

2022 – 2026
- Semantic SLAM for Spatial AI** — LG ELECTRONICS

- Role: Ran 3D scene graph SLAM (Hydra) on real sensor data and added object-level loop closing.

2023

Skills

Languages	C++, Python
SLAM / Optimization	ROS, GTSAM, Ceres, g2o, Sophus, Eigen
Perception	PCL, Open3D, OpenCV
Deep Learning	PyTorch, CUDA
Tools	Docker, Git, CMake, Linux
